

Daikin Airconditioning UK Ltd

Daikin cares for your air

Improved breathing comfort for allergy and asthma sufferers

# A tradition of **caring** for your air

Daikin has been a technology leader in energy-efficient climate control solutions for more than 80 years. Its products are renowned the world over for their mix of high technology, ease of use and pioneering concern for the environment.

This extensive background can be seen in our new fourth generation air purifier, the MC707. The technologically ground-breaking MC707 adds a new dimension of comfort to your life with its improved performance, ultra quiet operation, large airflow and new stylish design.

Daikin's latest air purifier model, the MC707, is the result of many years of investment in innovation at the service of the customer's well-being. These efforts place the MC707 among the best residential air purifiers on the market today.

## The Importance of **clean** indoor air

### Clean indoor air is hard to find these days

A link is increasingly being made between health problems and the quality of the air we breathe. Reported cases of allergic diseases and asthma are on the rise. According to the EFA\*, over **80 million people across Europe** have some form of **allergic disease** and their prevalence is increasing.  
\*EFA: European Federation of Allergy and Airway Diseases Patients Association / www.efanet.org / February '06.

Today's residences and buildings are better insulated than ever, but this implies a limited exchange of outdoor air with indoor air. As a result, the air we breathe indoors can be more polluted than outdoor air. Moreover, we commonly spend up to **90%** of our time in indoor environments.\*  
\*European commission at www.europe.eu.int / February '06.

Indoor air can include

- Airborne allergens such as pollen, dust, house dust mites droppings and pet dander.
- Triggers to allergens such as moulds, tobacco smoke and adjuvant substances.

*Allergens are impurities in the air that can bring on an allergic reaction. In an urban environment, a mixture of these allergens with other impurities present in the air – called **adjuvant substances** – such as Diesel Exhaust Particles (DEP's) produced by engines and Volatile Organic Compounds (VOC's) present in building materials, cosmetics, etc. can turn allergens into **heavy allergens**. These in turn can have increased negative health effects such as aggravated symptoms and the triggering of latent allergies.*

## Breathtaking **results**

Thanks to the Flash Streamer technology, developed by Daikin, the MC707 is highly efficient in eliminating these potentially harmful agents\*.

**99.6%**

### Allergen removal

The MC707 removes the most common allergens such as pollen, dust, mite droppings and mold and adjuvant substances such as formaldehyde.  
"Allergen Inactivation Experiments with Photo-Streamer", Wakayama Medical University (September 2004), "Verification of Inactivating Effects of Flash Streamer on Various Kinds of Allergen", Wakayama Medical University (October 2004) & "Verification Experiment of Allergen Degradation by Streamer Discharge", Wakayama Medical University (July 2005).

**99.99%**

### Removal of viruses and bacteria

Airborne viruses are removed by a **new Bio-Antibody filter** in less than 1 minute. Bacteria and mould spores are broken down by the Flash Streamer after being adsorbed by the Titanium Apatite photocatalytic filter.  
"Test for Antibacterial Activity", "Report No. 203120769-004, Japan Food Research Laboratories (April 2004), "Test for Colony Count of Mold", Report No. 205090528-002, Japan Food Research Laboratories (September 2005) "Evaluation of the Anti-influenza Virus IgY Filter", joint research report with Waseda University (March 2004)

**95%**

### Deodorisation

The Flash Streamer breaks down and removes odours before the purified air is returned to the room.  
Tested in accordance with the Japan Electrical Manufacturer's Association Standard JEM 1467. Be aware that the unit is unable to remove the harmful carbon monoxide that results from smoking cigarettes. Deodorising efficiency decreases with use. Not all continuously present odour components can be removed.

\* The Daikin Air Purifier is not a medical device and is not meant to be used as a substitute for any medical or pharmaceutical treatment. All figures given here may differ depending on the actual conditions of use.

# Enhanced technology means **cleaner air**

Besides a number of practical features, the MC707 owes its enhanced performance to an advanced 7-layer filtering system, the product of Daikin's continuous drive for innovation and efficiency.

## How does the 7-layer filtering system work?

- 1 The Pre-filter – containing catechin – captures large dust particles and pet hairs.
- 2 The new active Bio-Antibody Filter removes airborne viruses.
- 3 The Plasma Ionizer positively charges dust and pollen particles, which are removed by the negatively charged Electrostatic Dust Filter.
- 4 The Flash Streamer decomposes chemical substances such as odours and formaldehyde into harmless by-products.
- 5 The Flash Streamer also promotes a photocatalytic reaction on the surface of the Titanium Apatite Photocatalytic Filter 6 that removes bacteria and viruses.
- 7 The Deodorising Catalyst breaks down odours.

- Catechin is a natural anti-bacterial substance derived from tea leaves that kills germs that can attach to these particles.
- The filtering surface of a pleated filter is approximately 1.5 times larger than that of a conventional flat filter.

# Main features

## Large air flow: 420m<sup>3</sup>/h\*

\*(in TURBO MODE)

The Powerful 4-directional fan action reaches every corner of the room.

Applicable room size up to 48 m<sup>2</sup>

## Ultra quiet operation: 16dB(A)\*

\*(in SILENT MODE)

This makes the unit suitable for use in bedrooms.

## Portable

The unit can easily (only 9 kg) be moved from one room to another.

## Compact size

Fits everywhere. No room or office corner is too small for the MC707.

## Low maintenance, Easy to clean

Easy to clean flat panel.

Hand washable pre-filter and plasma ionizer.

### Cleaning the plasma ionizer

- 1 When cleaning indicator lights  
To maintain performance, the lower part of the plasma ionizer should be maintained periodically.
- 2 Remove dust from filter and in water

Bio-Antibody filter\* must be replaced yearly in order to maintain anti-virus action.

\*The Bio-Antibody filter is usable for one year after opening. The filter should be replaced annually. Nevertheless, overall operation will not be adversely affected if a Bio-Antibody filter is not used. The filter is effective 3 years from the date of manufacture.

Pleated filter to be replaced yearly. The unit includes 7\* pleated filters, one for immediate use and 6 spares.

\*Calculation of filter life is based on 10 cigarettes per day smoked in the room. (Results based on testing carried out in accordance with Japan Electrical Manufacturers Association JEM1467 standard.) The unit is unable to remove all harmful substances such as carbon monoxide found in cigarette smoke. Replacing the filters once per year is provided as a guide. The replacement interval will differ depending on how the unit is used and where it is located.

# Functional features

## Child lock

Set the child lock with the remote control to prevent small children from operating the air purifier.

## Pollen Ion Mode

By creating a gentle turbulence in the room air, pollen is caught before it lands on the floor.

## Automatic operation

Air flow is adjusted to the level of dirt in the air. When the air is cleaner, lower air flow rates are enabled. Thus saving electricity.

## Brightness adjustment

The brightness of the lamps on the indicator panel can be adjusted to one of three levels.

## TURBO Mode

This convenient mode provides high-power operation. Use it when you first arrive home or when you have unexpected guests.

## Negative Ion Mode

Turning on the 'RELAX' switch is all it takes to generate negative ions. The large air flow fills the entire room, corner to corner, with freshened air.

## Off timer

The remote control can be set to turn the unit off after 1, 2 or 4 hours.

## 4 fan speeds

Fan speed can be adjusted in four steps from LL to H mode.

## Main specifications

### MC707VM-W/S

MODEL		MC707VM-W/S				
Power supply		1 ~, 220-240/220-230V, 50/60Hz				
Dimensions	HxWxD	mm				
Colour		(W) = White + sparkling silver or (S) = Sparkling silver + metallic ocean blue				
Weight		Kg				
		8.7				
MODE (50HZ)		TURBO	H	M	L	SILENT
Power input	kW	0.055	0.023	0.014	0.010	0.008
Sound pressure level	dB(A)	47	38	31	24	16
Sound power level	dB(A)	62	52	40	39	31
Airflow rate	m <sup>3</sup> /h	420	285	180	120	60
Dust collecting method		Plasma ionizer (electrostatic dust collection) + Electrostatic dust collection filter				
Deodorising	Method	Flash Streamer + Titanium Apatite Photocatalytic filter + Deodorising catalyst				
	Deodorising performance (%)	95				
	Regenerate method	The Flash Streamer activates the photocatalytic reaction				
Bacteria filtering method		Bio Antibody Filter + Flash Streamer + Titanium Apatite Photocatalytic Filter				
Filter	Dust collection and deodorisation	Form	Pleated filter			
		Function	Deodorisation + disinfection + dust collection + adjuvant removal			
		Lifetime	1 filter/1 year			
	Bio-Antibody Filter		New			
	Pre-filter		Catechin pre-filter
